ok how do i install drivers for a video card? With Synaptic or apt-get i know how to do that You can browse for the package, right click and select install. k Or use the software centre Ah, gotcha is there a command for me to install that? You could browse for the package and search for a command-line option. Semtex type ubuntu-drivers list MonkeyDust: thanks should i also install geforce? geforce-drivers-390 or something else? You could try Semtex geforce is the name of the proprietary driver im on ubuntu 14.10, and it recommends xserver-xorg-video-nouveau do i have to install nouveau? yea No how does that differ from the official drivers? you should only install what is recommended... It's a development version So you can try it, and see if it works for your card. so that means its likely to mess up my system? Semtex, are you sure you have an nvidia card? yeah its the motherboard it's the intel vga card i wanted to use which is why i have the nouveau i could have just installed that driver semtex try sudo ubuntu-drivers autoinstall Mathisen: ubuntu-drivers autoinstall? Semtex that will try to install every nvidia driver it finds mathisen: will it mess up my current drivers? that might work. If it messes up you need 82157476af
